Elevator Code Associate (ECA) 101

Date: August 20, 2025

Location: San Juan, PR

Time: 8:00am-5:00pm (8hrs with 1hr lunch)

Cost: \$150 including lunch

Synopsis/ Overview:

Our codes today represent how the elevator trade communicates with other professions and industries. Without the basic knowledge or understanding of the fundamental regulations, a tangle of repeated errors consumes success.

The scope of ECA 101 is to deliver a basic familiarization with codes, guides, and reference material pertaining to people and material lifting devices. Caution: The 101 class will not provide in-depth knowledge of codes and guides or precisely how to navigate them; instead, its intended purpose is to familiarize individuals with elevator codes.

The class follows a path of instruction that will guide the student through many of the codes used in the elevator business today.

Topics include the purpose, type of equipment included and not included within a specific code, the application of codes and guides—including many need-to-know definitions—and the layout, or better said, the strategy of how codes and guides are assembled.

We created a strategy to help individuals better understand each code or guide and how they apply it to elevators, escalators, and other lifting devices and to each other.

Once completed, the student will be aware of Statutes, Laws, Rules, ASME A17 & 18, NFPA, and IBC codes and guides, thus becoming better aware of their motivational and regulatory needs while working within the elevator industry.

Who would benefit:

Are you or do you know someone who is new to the Elevator/Escalators code, including related equipment and materials?

You need to know what codes do and how they interact and impact your sales, Installation, modernization, engineering, architecture, building management, and construction career.

How about those involved within the regulatory side of the business, such as Administration, Boards, Committees, or others with oversight?

Are you new to the elevator business? Do you need to get a leg up to understand better what's required and why? This class is intended to prepare a person for a well-rounded path of knowledge and entry-level skills about "ELEVATOR CODES."

Knowledge is the path to success.

Note: This class is not for you if you are already effective/efficient with the Codes and Guides that govern our industry. It is a basic introduction and understanding of the codes, not necessarily an in-depth detailed navigation class. It is written not to overwhelm the novice.

Standards used in the presentation:

Whichever current standard or codes you're using doesn't matter, as this class is an introduction to, not a detailed study of codes.

- ASME: A17.1-2019 Safety Code for Elevators and Escalators
- A17.2- 2023 Guide for Inspection of Elevators and moving walks
- A17.6-2022 Standard for Elevator Suspension, compensation and Governor Systems
- A17.7-2012 Performance-based safety code for elevators and escalators
- A8.1 – 2020 Safety Standard for Platform Lift and Stairway Chairlifts
